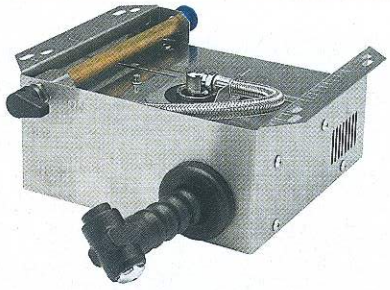
WMF

Pioneering an entirely new machine era, the WMF espresso represents a revolutionary type of coffee-making. Even with little technical know-how, users can now make the perfect espresso and café crème. Using the WMF espresso service staff continue to work in the traditional way front of house, where it is important to have the hiss and steam. But the machine now takes over at those points where errors often occur – grinding and dispensing the right amount of coffee or tamping with just the right amount of pressure. Fitted with an intuitive touch display, the WMF espresso guides users through all steps of coffee preparation. www.wmf-espresso.com

CallSystems

CustomerCall Restaurant Paging uniquely introduces customers to the invisible queue. The technology provides guests with the freedom to wander nearby, or simply sit at the bar and relax over a drink, safe in the knowledge that they won't lose their place in the queue. Staff are then free to upsell drinks at the bar, therefore encouraging a higher spend. The more efficient seating process also increases table turns for operators. As soon as a customer's table or food is ready, a member of staff simply presses a button on the transmitter and the customer receives an alert, advising them to return. The technology also removes congestion at the welcome point and staff spend less time searching for customers and more time delivering a great experience. www.call-systems.com



T&S Brass

T&S Brass and Bronze Works' B-7161-C compact hose reel offers convenient cleaning in tight spaces. Ideal for combi-oven or other light-duty cleaning applications, the B-7161-C hose reel features a 182.88 cm reinforced 0.635 cm diameter hose secured around an enclosed metal reel. Other features of the B-7161-C include a single-stream, push-button spray valve, an easy access shut-off valve located on the front panel, stainless steel enclosed housing protects working parts and an anti-lockout feature to ensure full retraction of the hose even when fully extended. Designed to fit in tight places in kitchens where having a small hose reel nearby comes in handy, the B-7161-C's compact size makes it easy to retrofit into existing configurations. www.tsbrass.com.

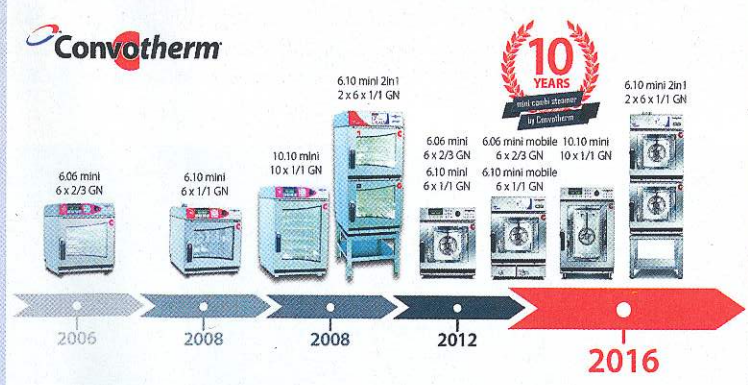
Monbana

The anamsaïa chaï latte range by Monbana is directly inspired by a traditional Indian recipe and boast unexpectedly spicy notes. Tea, milk and spices: an authentic new twist on the famous Chaï with its powerful Indian perfume. Just add water or milk to make it even smoother, the chaï latte drink can be served hot or cold, with a varied range of flavours. Very popular with the young consumers, this drink has transcended frontiers and trading posts and is developing considerably in the world of non-domestic catering. www.monbana.com

Mini Space – Maxi Performance! Convotherm's minis are genuine all-rounders: the Steam, Convection and Hot Steam modes with the 'Crisp&Tasty' climate function and the 'Press&Go' quick select feature make the appliances into full-fledged combi steamers. Practical extra functions such as regeneration, low-temperature cooking and further programmes round off the performance spectrum. All minis are equipped with injection steam generation because this is the most efficient system for appliances of this size.

Convotherm

The entire mini series is made up of combi steamers in four different sizes and eleven models. www.convotherm.com



Ecomax is known as a well-established entry-level brand for commercial dishwashers by Hobart. Some months ago, Hobart launched the product range ecomax plus, tailored to for example caterers, bakers or coffee shop owners who opt not only for low investment costs but also for added performance, ease of operation, and enhanced technical features. This product series is manufactured entirely in Germany. It comprises the models G 403, a professional glasswasher, and the F 503, a dishwasher for hygienically clean wash ware. The double-walled housing and the heat insulated door keep noise and steam to a minimum. With their deep-drawn wash tank, they are easy to clean. Also they offer technological improvements for good energy efficiency and low water consumption. www.ecomaxbyhobart.com
